

Thermal Shock Chamber TSD-100

Large-capacity two-zone chamber capable of exposing specimens to a uniform thermal stress.

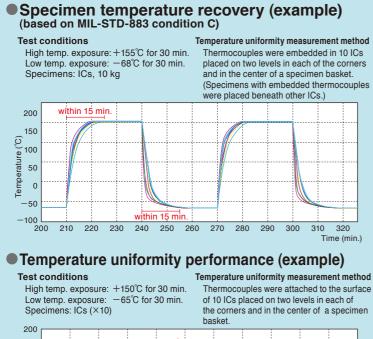

Two-zone thermal shock chamber ideally suited for Japanese and international test standards such as MIL, IEC or JASO . With its 100L test area, and its outstanding thermal uniformity characteristics, the TSD Thermal Shock Chamber from ESPEC can test specimens under a uniform thermal stress, and is ideally suitable for a wide range of applications, from research and development to inspection or production.

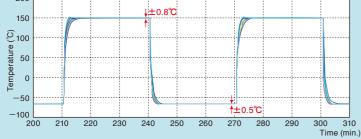

Performance

Meeting the high performance required by today's test standards

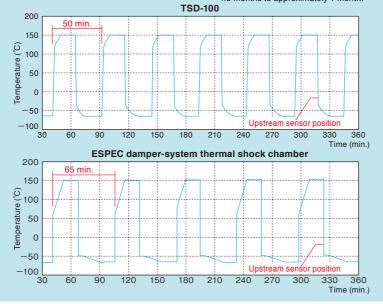

Test time comparison (example)

Test conditions High temp. exposure: +150°C, 15 min. after recovery Low temp. exposure: -65°C, 15 min. after recovery Specimens: ICs, 10kg Control points: Upstream of sensor positions

Test time reductions of approximately 15 minutes per cycle compared to other ESPEC models. For 3,000 cycles testing this cuts previous test times from 4.5 months to approximately 1 month.

Measurements

Temperature recovery time shortened with the two-zone system

During testing of 10 kg of plastic molded ICs, at temperature settings of $+150^{\circ}$ C and -65° C, the specimen temperature recovers in less than 15 minutes.

Meets International standards

Designed to comply with major environmental test standards like MIL, IEC, JASO, JEITA. (p.9, 10)

Improved temperature uniformity performance

The chamber features outstanding temperature uniformity characteristics, 30% better than previous ESPEC models during temperature recovery; it also includes features to ensure uniform air flow into the test area. Specimens are thus subject to a more uniform thermal stress, with reduced variations in test results between specimens.

Reduced test time by means of test area transfer

Temperature exposure is quickly changed by moving the test area up and down between the high temperature and low temperature chambers, thus reducing the time taken to reach the preset temperature as well as total test duration.

Specimen Temperature Trigger (STT) function

The TSD-100 chamber now includes a STT function. It monitors the specimen temperature using two sensors attached to the specimen and starts to count the exposure time, or proceeds to the next step once the specimen temperature reaches the preset temperature. This eliminates the need for pretesting, reducing the overall test time and ensures an accurate specimen temperature attainment. The specimen and test area temperatures can be recorded by connecting a temperature recorder.

Utility

Boast of a 100L capacity

Featuring a 100L test area capacity, the chamber dramatically increases the processing capabilities and even allows to test A4-size printed circuit boards laid flat at once.

Smooth specimen transfer

The "Soft-move mode" is used to reduce vibration shocks when specimens are moving between the high and low temperature chambers.

Test area anti-drop mechanism to protect specimens

A braking system fitted to the drive mechanism prevents specimens from falling into the test area when the chamber stops operation.

Safe specimen handling thanks to ambient temperature recovery

An ambient temperature recovery feature is included to draw in exterior air after testing is complete and return to ambient temperature, allowing specimens to be removed safely.

Easy wiring access

A cable port is provided on the right side to allow easy wiring of specimen for measurement during high and low temperature cycle tests. (Optional cable port can also be provided on the left side.)

Viewing window (option)

An optional viewing window can be added to check specimens and wiring during testing. The viewing window includes an interior lighting.

Comprehensive safety system

A dual safety system automatically stops the test area drive mechanism if the door is left open, and automatically locks the door when the test area is in motion.

Test areas (top: high temperature chamber bottom: low temperature chamber)

Specimen temperature measurement (specimen temperature input standard equipment: 2 locations) optional: 3 locations)

Viewing window (option)

Control operation

Instrumentation

Color LCD interactive touch-screen system

Operation and settings simplified by the use of a touch-screen LCD display (instructions displayed on-screen). At-aglance confirmation of test patterns, test area temperatures, temperature cycles, upstream/ downstream control, and trend graph displays.

Door-mounted instrumentation

Instrumentation including the touchscreen controller is incorporated into the door. It reduces the overall footprint and frees up both sides of the chamber for easy access.

Eco-friendly

A whole range of environmentally-friendly features

Built-in paperless recorder (option) *Rear side, on the right

Portable paperless recorder (option)

Reduced power consumption

Reducing power consumption is an important issue for our customers. The TSD-100 employs number of measures, such as the use of electronic expansion valves to regulate the refrigeration capacity control, and thus reduce overall power consumption by 30% (compared to previous ESPEC models).

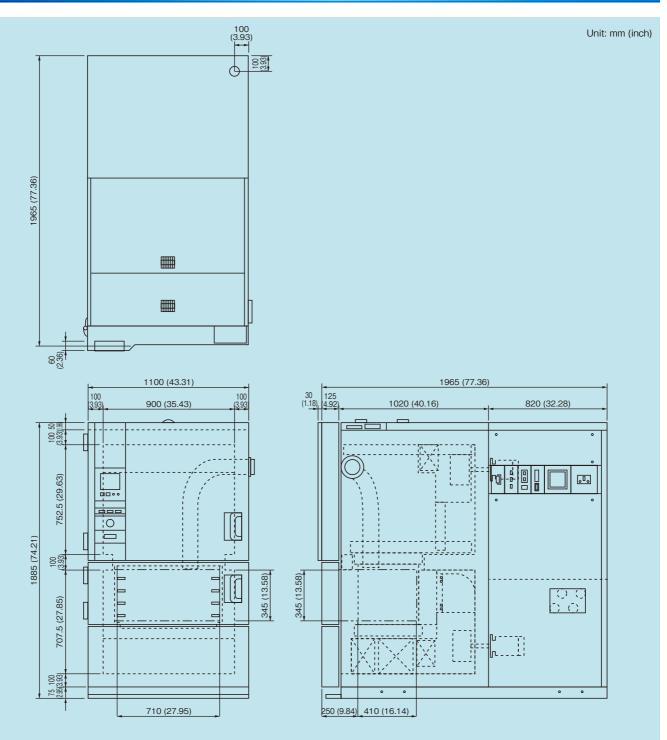

Material labeling for easy recycling

Plastic molded components are labeled and easily detachable to make recycling easier duning future disposal of the equipment.

Paperless recorder (option)

2 types of paperless recorders are available (built-in or portable) to record temperatures from various sources, such as test area temperatures. Recording is possible on Compact Flash Card or via USB port.

Safety precautions

- •Do not use explosive substances, flammable substances, or substances that contain those substances as a specimen under any circumstances. Danger: Risk of explosion and fire
- •Do not put corrosive substances inside the test area. If corrosive substances are generated from the specimen, the life of the product's corrosion resistance will decrease dramatically due, in particular, to corrosion of stainless steel, resin, and silicone.
- •Do not use living organisms or items that exceed the allowable heat load as a specimen.
- •Always read the operation manual before using the Product.

OPTIONS

Paperless recorder

Records temperature of each section such as the temperature inside the chamber. Select either built-in or portable type. $\langle Built-in type \rangle$

- Number of inputs (Initial setting):
 - PL1S: 1 (5 more channels can be turned ON) Data saving cycle: 1 sec
- PL3S: 3 (3 more channels can be turned ON)
- Data saving cycle: 1 sec PL3L: 3 (3 more channels can be turned ON)
- Data saving cycle: 5 sec PL5S: 5 (1 more channels can be turned ON) Data saving cycle: 1 sec
- PL5L: 5 (1 more channels can be turned ON) Data saving cycle: 5 sec
- PL6S: 6 Data saving cycle: 1 sec

PL6L: 6 Data saving cycle: 5 sec Temperature range: -100 to +220°C

External memory media: CF memory card (256MB) USB port

Language support: ENG, JPN

Built-in type

 $\langle Portable type \rangle$

Number of inputs (Initial setting): PPL1S: 1 (5 more channels can be turned ON) Data saving cycle: 1 sec PPL3S: 3 (3 more channels can be turned ON) Data saving cycle: 1 sec PPL3L: 3 (3 more channels can be turned ON) Data saving cycle: 5 sec PPL5S: 5 (1 more channels can be turned ON) Data saving cycle: 1 sec PPL5L: 5 (1 more channels can be turned ON) Data saving cycle: 5 sec PPL6S: 6 Data saving cycle: 1 sec PPL6L:6 Data saving cycle: 5 sec Temperature range: -100 to +220°C External memory media: CF memory card (256MB) USB port Language support: ENG, JPN

Temperature recorder (digital)

- $-100 \text{ to } +220^{\circ}\text{C} /100 \text{ mm}$
- RK-61: 1 pen
- RK-63: 3 pens
- RK-64: 6 dots

Recorder wiring

Preparation of a power cable, temperature sensor, and a grounding wire for additional installation in the future.

Recorder terminal

Used to output the temperature within test area, hot chamber, cold chamber.

Thermocouple

Attached to specimens to measure specimen temperature.

• Thermocouple type T without ball (Copper/ Copper-Nickel)

*Same as accessory items

STT 3-point expansion

3 thermocouples provided to measure the specimens' temperature via the STT function (2 inputs are equipped as standard.)

Exposure signal output

A signal is output via a contact switch when test area temperature is within the user-selected range. This signal can be used to control peripheral instruments, like applying a voltage to specimens only during high temperature exposure, or monitoring test operation from a remote point.

Total cycle counter

Indicates cycle counts. Display range: 1-99999999 (with resetting function)

Auxiliary cooling injector (LCO₂)

Used to reduce the temperature recovery time of low temperature exposure by injecting liquefied carbon dioxide at beginning of exposure.

Auxiliary cooling injector (LN₂)

Used to reduce the temperature recovery time of low temperature exposure by injecting liquefied nitrogen at beginning of exposure.

Viewing window

Used for observation of the specimens inside the chamber. Dimensions: W190×H340 mm Chamber lamp: Halogen lamp (×1)

OPTIONS

Additional cable port

Provided in addition to the standard cable port. (right side) Location: Left side of the main unit Internal diameter: 100 mm

Cable port rubber plug

Prevents air leakage from the cable port.

Heavy-duty shelf

Used to hold heavy specimen exceeding the load capacity of the standard specimen basket.

Load capacity: 15 kg

* Equally distributed load, not included shelf brackets and specimen baskets.

Specimen basket/ shelf bracket

Equivalent to standard accessory. Material: Stainless steel (5 mesh)

Casters

Installed for mobility. 6 casters: 6 levelling-feet: 4

Chamber dew tray

Prevents water leaks from the chamber onto the floor.

* The use of casters is recommended to facilitate operation.

Additional overheat protector

Additional preventive measures can be taken for excessive temperature rise in the chamber, in addition to the standard equipped double overheat protector.

External alarm terminal

If the safety device of the chamber is activated, the external alarm terminal will notify :t to a remote point.

Emergency stop pushbutton

Stops the chamber immediately.

Anchoring fixtures

Used to bolt the chamber to the floor.

Interface

- RS-232C
- GPIB
- * Select one, instead of standard RS-485.

Communication cables

- 5m/ 10m/ 30m • RS-485
- RS-232C 1.5m/ 3m/ 6m
- GPIB

2m/4m

Power cable

- 5 m
- 10 m
- * Not applicable for optional 208, 380 and $400/415 \mathrm{V}$ AC power supply specification.
